

IN THE CLAIMS

Please amend the claims as follows:

1.-49. (Cancelled)

50. (Currently Amended) An information processing apparatus, comprising:
a communication unit configured to communicate with a portable device for playing
~~content~~ music data; and
a control unit configured
to detect a connection between the information processing apparatus and the
portable device via the communication unit, and
to launch automatically a predetermined application installed in the
information processing apparatus in response to the connection being detected,
wherein
said predetermined application is configured to transfer the ~~content~~ music data
between the portable device and the information processing apparatus, and to play the ~~content~~
music data.

51. (Currently Amended) The information processing apparatus according to claim
50, wherein
based on the launched application, said control unit
controls the communication unit to receive associated information of the
~~content~~ music data from the portable device, and
controls a display unit to display said associated information.

52. (Currently Amended) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit controls the communication unit to transfer the ~~content~~ music data from the information processing apparatus to the portable device.

53. (Currently Amended) The information processing apparatus according to claim 52, wherein

based on the launched application, said control unit controls the transferring of the ~~content~~ music data without regard to a user input.

54. (Currently Amended) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit extracts the ~~content~~ music data to be transferred from the information processing apparatus according to a predetermined condition.

55. (Currently Amended) The information processing apparatus according to claim 54, wherein

the predetermined condition is related to associated information of the ~~content~~ music data.

56. (Previously Presented) The information processing apparatus according to claim 54, wherein

the predetermined condition is random.

57. (Previously Presented) The information processing apparatus according to claim 54, wherein

the predetermined condition is stored in the portable device.

58. (Currently Amended) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit

controls a reading unit to read ~~content~~ music data from a Compact Disc (CD),

controls a compression of the read ~~content~~ music data, and

stores the compressed ~~content~~ music data into the information processing apparatus.

59. (Currently Amended) The information processing apparatus according to claim 58, wherein

based on the launched application, said control unit controls the communication unit to transfer the compressed ~~content~~ music data to the portable device without regard to a user input.

60. (Currently Amended) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit controls a different communication unit to download the ~~content~~ music data from a web server.

61. (Currently Amended) The information processing apparatus according to claim 60, wherein

based on the launched application, said control unit controls the communication unit to transfer the downloaded ~~content~~ music data to the portable device without regard to a user input.

62. (Currently Amended) The information processing apparatus according to claim 52, wherein

based on the launched application, said control unit controls the communication unit to receive the ~~content~~ music data from the portable device.

63. (Previously Presented) The information processing apparatus according to claim 50, wherein

said communication unit is Universal Serial Bus (USB).

64. (Previously Presented) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit controls a display unit to display an indication that the portable device is connected to the information processing apparatus.

65. (Currently Amended) The information processing apparatus according to claim 50, wherein

based on the launched application, said control unit controls reproduction of said ~~content~~ music data from the portable device.

66. (Cancelled)

67. (Currently Amended) The information processing apparatus according to claim 50, wherein

the predetermined application is configured to organize the ~~content~~ music data stored in the information processing apparatus.

68. (Currently Amended) A non-transitory computer-readable storage medium having embedded therein instructions, which when executed by a processor, cause the processor to perform a method of an information processing apparatus, the method comprising:

detecting, by a control unit of the information processing apparatus, whether a portable device for playing ~~content~~ music data is connected to the information processing apparatus via a communication unit, the communication unit being configured to communicate with the portable device; and

launching automatically, by the control unit of the information processing apparatus, a predetermined application installed in the information processing apparatus in response to the portable device being detected to be connected to the information processing apparatus, wherein

said predetermined application is configured to transfer the ~~content~~ music data between the portable device and the information processing apparatus, and to play the ~~content~~ music data.

69. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, further comprising:

based on the launched application,

controlling, by said control unit, the communication unit to receive associated information of the ~~content~~ music data from the portable device, and

controlling, by said control unit, a display unit to display said associated information.

70. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, further comprising:

based on the launched application, controlling, by said control unit, the communication unit to transfer the ~~content~~ music data from the information processing apparatus to the portable device.

71. (Currently Amended) The non-transitory computer-readable storage medium according to claim 70, further comprising:

based on the launched application, controlling, by said control unit, the transferring of the ~~content~~ music data without regard to a user input.

72. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, wherein

based on the launched application, extracting, by said control unit, the ~~content~~ music data to be transferred from the information processing apparatus in accordance with a predetermined condition.

73. (Currently Amended) The non-transitory computer-readable storage medium according to claim 72, wherein

the predetermined condition is related to associated information of the ~~content~~ music data.

74. (Previously Presented) The non-transitory computer-readable storage medium according to claim 72, wherein
the predetermined condition is random.

75. (Previously Presented) The non-transitory computer-readable storage medium according to claim 72, wherein
the predetermined condition is stored in the portable device.

76. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, further comprising:

based on the launched application,

controlling, by said control unit, a reading unit to read ~~content~~ music data from a Compact Disc (CD),

controlling, by said control unit, a compression of the read ~~content~~ music data,
and

storing, by said control unit, the compressed ~~content~~ music data into the information processing apparatus.

77. (Currently Amended) The non-transitory computer-readable storage medium according to claim 76, further comprising:

based on the launched application, controlling, by said control unit, the communication unit to transfer the compressed ~~content~~ music data to the portable device without regard to a user input.

78. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, wherein

based on the launched application, controlling, by said control unit, a different communication unit to download the ~~content~~ music data from a web server.

79. (Currently Amended) The non-transitory computer-readable storage medium according to claim 78, further comprising:

based on the launched application, controlling, by said control unit, the communication unit to transfer the downloaded ~~content~~ music data to the portable device without regard to a user input.

80. (Currently Amended) The non-transitory computer-readable storage medium according to claim 70, wherein

based on the launched application, controlling, by said control unit, the communication unit to receive the ~~content~~ music data from the portable device.

81. (Previously Presented) The non-transitory computer-readable storage medium according to claim 68, wherein

said communication unit is Universal Serial Bus (USB).

82. (Previously Presented) The non-transitory computer-readable storage medium according to claim 68, wherein

based on the launched application, controlling, by said control unit, a display unit to display an indication that the portable device is connected to the information processing apparatus.

83. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, further comprising:

based on the launched application, controlling, by said control unit, reproduction of said ~~content~~ music data from the portable device.

84. (Cancelled)

85. (Currently Amended) The non-transitory computer-readable storage medium according to claim 68, wherein

the predetermined application is configured to organize the ~~content~~ music data stored in the information processing apparatus.

86. (Currently Amended) A method of an information processing apparatus, the method comprising:

detecting, by a control unit of the information processing apparatus, whether a portable device for playing ~~content~~ music data is connected to the information processing apparatus via a communication unit, the communication unit being configured to communicate with the portable device; and

launching automatically, by the control unit of the information processing apparatus, a predetermined application installed in the information processing apparatus in response to the portable device being detected to be connected to the information processing apparatus, wherein

said predetermined application is configured to transfer the ~~content~~ music data between the portable device and the information processing apparatus, and to play the ~~content~~ music data.

87. (Previously Presented) The information processing apparatus according to claim 50, wherein

the control unit is configured to determine whether the predetermined application has been started, and to automatically launch the predetermined application in response to the connection being detected and a determination that the predetermined application has not been started.

88. (Previously Presented) The information processing apparatus according to claim 50, wherein the control unit is configured to execute a starter program that detects the connection between the information processing apparatus and the portable device, and to launch automatically the predetermined application in response to the connection being detected.
